

K-CARB PLUS FOR LACTATING DAIRY COWS

DCAD SUPPLEMENT

DCAD Balancing High Potassium Free Flowing

Improved Potassium Carbonate Handling

In over a decade of feeding experience, feed mill manager feedback, research findings and global sales K-CARB PLUS has proven to be a successful method of safely delivering potassium K+ and positively impacting the health and performance of lactating dairy cows, while providing solid economic benefits.

K-CARB PLUS BENEFITS:

A fat coated anhydrous potassium carbonate

Improved stability and product shelf life

Delivers a high level of potassium cation as "K" 53%

Provides crude fat at a minimum level of 5%

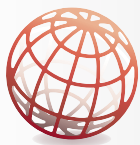

Protection from moisture, highly basic and highly acidic ingredients

A Free Flowing Coated Solution For Bulk Storage

Because of the protective properties of **K-CARB PLUS**, it can be used in bulk ingredient tanks and micro bins without bridging, remaining **free flowing**. These protective properties are why **K-CARB PLUS** has been so successful in least cost feed formulas for DCAD balancing. Feed Mill Managers can rely on the product staying **free flowing** in the most humid conditions.

K-CARB PLUS is used as the test product in the recent issue of *American Dairymen* titled, "Improving Potassium Supplementation in Dairy Cows with a Protected Potassium Carbonate." In this article, **K-CARB PLUS** is directly referred to as the source of, "Protected Potassium Carbonate." A PDF file of the full article is available to download on our website: www.OriginationO2D.com/kcarb_research.aspx
