

Equine Health and Nutrition. Every Horse Every Stage.

EQUINE

KEY BENEFITS

Improved Hindgut Function: Stimulates the growth of beneficial bacteria, which breaks down fiber and produces volatile fatty acids (VFAs), providing energy for the horse.

Weight Management & Nutrition: Increases nutrient absorption, which is particularly useful for horses with weight loss, "hard keepers," or those requiring better conditioning.

Stress Management: Supports the gut microbiome during periods of stress, such as training, travel, changes in diet, or boarding.

Immune System Support: Hilyses® contains high levels of beta glucans which helps support the immune system.

Performance and Recovery: Performance horses under stress (traveling, hard training) have high cell turnover needs. Hilyses® contains high levels of nucleotides which support the rapid regeneration of cells, reducing lactic acid buildup and boosting stamina, which speeds up recovery.

FEEDING RECOMMENDATIONS

Young Horses from 0 to 2 years: 7 to 10 g/hd/d
Adult Horses: 10 to 20 g/hd/d

These are general feeding recommendations. To adjust feeding rates based on pathogen load, feed quality, or stress level, contact your Hilyses® representative for technical support.

Available in 25 kg bags

Hilyses® is a registered trademark of ICC Brazil.
